| 5.6      | January 12, 2024 | Updates include the following:  
• General updates in support of Software Release 28.3 and NVM 9.0. |
| 5.5      | August 22, 2023  | Updates include the following:  
• General updates in support of Software Release 28.2 and NVM 9.20. |
| 5.4      | February 24, 2023 | Updates include the following:  
• General updates in support of Software Release 28.0 and NVM 9.20.  
• ESXi 6.7 is no longer supported. |
| 5.3      | December 6, 2022 | Updates include the following:  
• General updates in support of Software Release 27.8 and NVM 9.10. |
| 5.2      | November 14, 2022 | Updates include the following:  
• General updates in support of Software Release 27.7 and NVM 9.10. |
| 5.1      | August 12, 2022  | Updates include the following:  
• General updates in support of Software Release 27.6 and NVM 9.0. |
| 5.0      | May 25, 2022     | Updates include the following:  
• General updates in support of Software Release 27.3 and NVM 8.70. |
| 4.9      | May 2, 2022      | Updates include the following:  
• Table 10 iavf should be 4.4.2. |
| 4.8      | April 4, 2022    | Updates include the following:  
• Updated Link modes 100 mb/s SGMII table footnote in Table, "Interface and CFG_ID Supported for X710/XL710". |
| 4.7      | March 29, 2022   | Updates include the following:  
• General updates in support of Software Release 27.1 and NVM 8.60. |
| 4.6      | October 19, 2021 | Updates include the following:  
• General updates in support of Software Release 26.6 and NVM 8.50. |

1.0 Features Supported

The following tables list the feature support provided by the NVM and software drivers for a given release starting with the production release (Release 19.3, NVM 4.24). The Intel® Ethernet Controller X710/XXV710/XL710 Datasheet reflects the silicon device capability, while this document reflects what is actually supported in the NVM and software for a given release.

Notes:

- Throughout this document:
  - The Intel® Ethernet Controller X710/XL710 is represented as "X710/XL710”.
  - The Intel® Ethernet Controller XXV710 is represented as "XXV710”.
  - “X” = Supported with Intel NVM and software driver.
  - “---” = Not supported with Intel NVM and software driver.
- The following table lists software releases and associated NVMs:

<table>

</table>

Notes:
1. Supports two 10 GbE SFI direct attach connections in a QSFP+ connector.
2. Only supported with Intel® Ethernet Connection X557 device.
3. XAUI link can be achieved via parallel detection with a KR4 NVM image.
4. KX link can be achieved in any of the backplane images via auto-negotiation.

<thead>
<tr>
<th>Feature</th>
<th>Supported in Release</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>19.3 and 19.4</td>
</tr>
<tr>
<td>SFP SX/LX optical modules (single speed)</td>
<td>---</td>
</tr>
<tr>
<td>SFP+ SR/LR multi-speed (1/10 GbE) optical modules</td>
<td>X</td>
</tr>
</tbody>
</table>

**Notes:**
1. Supporting LR4 requires more power and thus is disabled by default in QSFP+ NVM images from Intel. Contact your hardware vendor to see if the modules can be supported.
2. The AOC should be compliant to the 40 GbE XLPI electrical specification per IEEE 802.3.
3. Any loopback modules which has an EEPROM configuration that matches any of the supported media of the device should achieve link, with one exception: CR4 link cannot be achieved with loopback module without PCS Nonce Field Override register set. FW will eventually switch to XLPI and try link which should work.
4. Verification was done with Electronic Loopback 0dB Class4. Timbercon EL-12-07002-176.
5. Only “Limiting Initialization” cables are supported.
6. Support limited to Intel® E40GQSFPSR 40 Gb optics and AMPHENOL #943-99354-10005 (QSFP+, 5 m) cable.
7. Any loopback modules having an EEPROM configuration that matches any of the supported media of the device should achieve link.
8. Verification was done with SFP+: Amphenol SFP+ 3.5 dB APF14120016DKD P/N 610540001.
10. Finisar FCLF8521P2BTL is described to be functionally equivalent to Finisar FCLF-8521-3.

</tr>
</tbody>
</table>

### Notes:
1. Only Intel-branded modules are supported. Other cables and modules may function but are not validated by Intel.
2. Linking without FEC when it is required is not blocked by XXV710 firmware, but may result in poor link quality and is not supported.
4. CL74 = Clause 74 from the IEEE Specification.
5. The specification states that only CL108 RS-FEC is supported. However, some link partners may not support it. XXV710 firmware will attempt to link in all FEC modes.
6. Only "Limiting Initialization" cables are supported.
7. Any loopback modules having an EEPROM configuration that matches any of the supported media of the device should achieve link.
8. Verification was done with SFP+: Amphenol SFP+ 3.5 dB APF14120016DKD P/N 610540001
10. Finisar FCLF8521P2BTL is described to be functionally equivalent to Finisar FCLF-8521-3.
### 1.2.1 XXV710 Link Establishment State Machine (LESM)

The XXV710 LESM enables increased interoperability with IEEE and 25 Gb Ethernet Consortium capable 25 GbE switches. This allows the XXV710 to link with devices that may not be fully compliant with the IEEE or Consortium specifications.

The following table shows the link modes the XXV710 firmware will attempt for the various supported media types. Since there are link partners that do not support RS-FEC, the LESM will attempt to get link instead of blocking the connection even when RS-FEC is required.

The LESM will attempt to achieve link for the configurations shown in red text. For these modes, it is important to note that the configured FEC is not the required FEC as specified by the IEEE 802.3by specification. This could result in high Bit Error Rate (BER), but it allows users to achieve link and pass data with non-spec compliant partners. Even though degraded performance can be seen as result of not having the properly-configured FEC, getting a link is better option than blocking the link.

The link modes shown in black are compliant to the IEEE802.3by specification and enable the proper FEC mode as required and appropriate. The link modes shown in yellow table cells are the expected or default link modes for a given media type.

For full details on LESM, refer to the “25G Link Establishment State Machines” section in the Intel® Ethernet Controller X710/XXV710/XL710 Datasheet.

<td>—</td>
</tr>
</tbody>
</table>

**Notes:**
1. Link is attempted without the proper FEC mode when it is required and is not blocked by the XXV710 firmware. However, this may result in poor link quality and is not supported.
2. 25G-SR optics are typically sold with a BER of either 10⁻¹² or 10⁻⁵. Clause 112 of IEEE802.3by specification requires RS-FEC for 10⁻⁵ SR optics. Optics labeled 10⁻¹² still default to attempting link with RS-FEC, as both ends of the link must have modules with that improved BER to safely link without FEC.

<td>X</td>
</tr>
</tbody>
</table>

Notes:
1. For features supported with DPDK drivers please refer to dpdk.org.
2. 16 queues per VF is supported using Linux Kernel PF and poll mode VF only.
3. The device only processes PTP packets using the Layer 2 packet format.
4. Pre-Boot Option ROM should be stored in the Flash attached to the XL710.
5. For 10GBASE-T applications only.
6. The design of Recovery Mode precludes rollback to prior versions of the NVM, as indicated in Table 11 and Table 12. This is because the addition of the Recovery Mode capability changed the definition of some regions of the NVM to be write-protected. Rollback to a prior version requires access to these write-protected regions, and thus, the rollback would fail.
7. The Linux i40evf driver is renamed to “iavf” starting in Software Release 24.0.
8. All Linux i40e support refers to the driver posted on intel.com and sourceforge.net. OS vendors may release feature on different schedules. Contact OS vendor for more information.
9. Supports read-only operation.
### 2.0 Operating Systems Supported

The following tables list the supported operating systems and virtualized operating systems, respectively. For the latest OS support, see http://intel.com/support/ethernetos.

Notes:
1. The Linux i40evf driver is renamed to "iavf" starting in Software Release 24.0.
2. The Windows V40E driver is renamed to "iavf" starting in Software Release 24.0.
3. The FreeBSD iXLv driver is renamed to "iavf" starting in Software Release 24.0.
3.0 NVM and Software Compatibility

With Intel® Ethernet Network Adapters, both the firmware (device NVM image) and network drivers are field-serviceable, and the NVM image and network driver are updated as a matched set. Updating the device image and driver together can increase key features including performance, manageability, media types, physical port counts, virtualization, offloads, remote boot options, VLAN support, teaming, and Receive Side Scaling.

The following tables indicate the sets of NVM images and Intel® Ethernet Controllers Software releases that go together. Intel recommends that you update the NVM and Software Driver to compatible versions.

**NOTE**
Update to the device driver for given release prior to running the NVM update tool.

### Table 9. Software/NVM Compatibility for X710/XL710

</tbody>
</table>

**Notes:**

1. These are out-of-tree versions.
2. The Linux i40evf driver is renamed to "iavf" starting in Software Release 24.0.
3. For devices that are AVF compliant as described here (https://www.intel.com/content/www/us/en/products/docs/network-io/ethernet/controllers/ethernet-adaptive-virtual-function-hardware-spec.html), AVF base mode features are supported across NVM/PF combinations. Advanced features for VF drivers might require an update to NVM and PF/AVF drivers.
5. All NVMs in this release are 5.02 except 10GBASE-T NVM, which are 5.03.
6. Earlier versions of the driver (i.e., 1.5.x and 1.6.x) should work, but have not been fully validated.
7. i40en-2.1.5.0 and i40en-2.2.x have both Native and ENS driver capabilities.

Notes:
1. These are out-of-tree versions.
2. The Linux i40evf driver is renamed to "iavf" starting in Software Release 24.0.
3. For devices that are AVF compliant as described here [https://www.intel.com/content/www/us/en/products/docs/network-io/ethernet/controllers/ethernet-adaptive-virtual-function-hardware-spec.html], AVF base mode features are supported across NVM/PF combinations. Advanced features for VF drivers might require an update to NVM and PF/AVF drivers.
5. i40en-2.1.5.0 and i40en-2.2.x have both Native and ENS driver capabilities.

Additionally, the NVM update package that comes with the Intel® Ethernet Controllers Software Release allows updates from older NVM versions. The following tables indicate the version of NVM from which the tool allows updates.

**New NVM (with Associated Tools, and Base Driver Version)³,²**

**Ethernet Controller X700 Series—NVM and Software Compatibility**

**Doc. No.: 332191, Rev.: 5.6**

January 2024

Feature Support Matrix

Intel® Ethernet Controller X710/XXV710/XL710
## NVM and Software Compatibility—Intel® Ethernet Controller X700 Series

<table>
<thead>
<tr>
<th>Current (Old) NVM</th>
<th>New NVM (with Associated Tools, and Base Driver Version)</th>
</tr>
</thead>
<tbody>
<tr>
<td>4.24/4.25/4.26</td>
<td>4.42</td>
</tr>
<tr>
<td>9.30</td>
<td>No</td>
</tr>
<tr>
<td>9.40</td>
<td>No</td>
</tr>
</tbody>
</table>

Notes:
1. NVM transition must be done with the Tools and Base Driver from the latest release. Refer to Table 9 for supported NVM, Tools, and Base Driver versions.
2. Each step of a NVM transition requires a reboot (PCIe reset) and in rare cases a power cycle.
3. Updating to same image again is allowed.
4. Rollback is allowed between supported versions and NVM configuration versions where the rollback version is the same.
5. Must transition to NVM 4.42, then NVM 4.53.
6. Must transition to NVM 4.42, then NVM 5.02/5.03/5.04/5.05.
7. Must transition to NVM 4.42, then NVM 6.01.
8. Should work, but has not been fully validated.
9. Rollback version is incremented when performing this update, therefore downgrade is not permitted to previous version.
10. Must transition to NVM 4.42, before upgrade to NVM 6.80 - 8.60.
11. Transitions from NVM 5.02, 5.03, and 5.04 to NVM 5.05 are permitted.

## NOTE

The MinSRev on your device determines if you can downgrade to an older SRev. For details on how this works, see the *Minimum Security Revision Control for Intel® Ethernet Products Application Note* (Doc ID: 635205).

Notes:
1. NVM transition must be done with the Tools and Base Driver from the latest release. Refer to Table 10 for supported NVM, Tools, and Base Driver versions.
2. Each step of a NVM transition requires a reboot (PCIe reset) and in rare cases a power cycle.
3. Updating to same image again is allowed.
4. Rollback is allowed between supported versions and NVM configuration versions where the rollback version is the same.
5. Rollback version is incremented when performing this update, therefore downgrade is not permitted to previous version.
6. Should work, but has not been fully validated.
7. Should work, but has not been fully validated.
8. Should work, but has not been fully validated.
9. Should work, but has not been fully validated.
10. Should work, but has not been fully validated.
11. Should work, but has not been fully validated.
12. Transitions from NVM 6.01 to NVM 6.02 are permitted.
NOTE
The MinSRev on your device determines if you can downgrade to an older SRev. For details on how this works see the Minimum Security Revision Control for Intel® Ethernet Products Application Note (Doc ID: 635205).
