---	--------------

** Intel appreciates the customer's desire to receive the latest revision of products. However, Intel manages inventory on a first in first out (FIFO) basis at the MM# level. Subsequently, customer requests for a specific revision of material (below the MM#) will not be supported by Intel.*

Description of Change to the Customer:

Intel is implementing the following changes on the Intel® Server Chassis P4216XXMHJC:

1. The Front Panel Printed Circuit Board is being updated with the following changes:
 - a. Add nine resistors to pull-up circuits for the NIC 1/2/3 link LED, status LED, ID LED, HDD LED, and power LED in the front panel. This is to allow the front panel to meet Intel design guidelines. Customers will not see any functional difference.
 - b. Add two resistors to improve the LED brightness. Customers will not see any functional difference.

2. Change the power button cap icon outer diameter from 4.0mm to 3.5mm. The transparent area on the post-change button is more centralized than on the pre-change one. The purpose of this change is to make the button brighter. The post change button icon is smaller, but more of the icon area is directly illuminated by the LED.

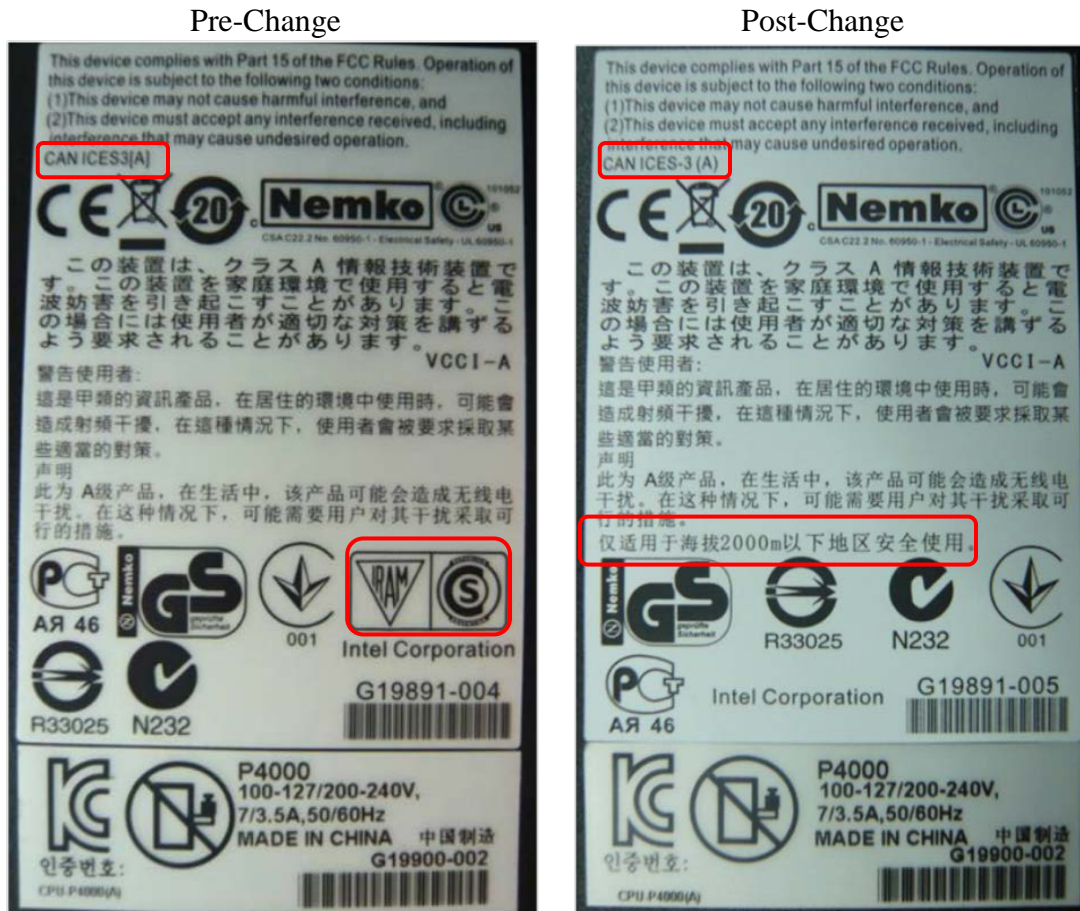

See the picture below for details:

Pre Change

Post Change

- Remove the safety label IRAM, update the Canada statement, and add an altitude warning in Chinese on the common regulation label.

- Remove the safety label IRAM and update the Canada statement on the outer carton label.

Customer Impact of Change and Recommended Action:

Intel does not expect any impact to customers from the changes, but encourages customers to understand the changes and determine the impact on their applications.
