Change Notification #: 117381 - 00
Change Title: Intel® Server Chassis R1304WTXXX,
PCN 117381-00,
Product Design, Order Code,
Rear panel and rear bracket new design
Date of Publication: January 09, 2020

Key Characteristics of the Change:

Product Design, Order Code

Forecasted Key Milestones:

Date Customer Must be Ready to Receive Post-Conversion Material:*	January 25, 2020
--	------------------

*Intel appreciates the customer's desire to receive the latest revision of products. However, Intel manages inventory on a first in first out (FIFO) basis at the MM# level. Subsequently, customer requests for a specific revision of material (below the MM#) will not be supported by Intel.

Description of Change to the Customer:

The Intel® Server Chassis listed in the "products affected" table is being affected by the following list of changes to improve the connection of Small Form-factor Pluggable transceiver (SFP+) cables on the rear panel and the miniSAS connection.

As a result of these changes the rear bracket and riser on the 1U chassis requires updating the MM number.

The 1U chassis changes are:

1. Change the design of the left rear bracket

2. Adding holes to the rear panel

3. Riser bracket new design

Related information to these changes on the Intel® Server Chassis and Intel® Server Systems have been previously referenced in PCN116118-05.

Customer Impact of Change and Recommended Action:

Intel recommends customers to perform a fit check on their systems and chassis based on this new design.

Please contact your Intel representative if you require orders be filled specifically with either the post-change or pre-change MM number; otherwise, all orders will be filled with the pre-change MM number until inventory has been depleted.

Contact your local Intel Field Sales Rep if you have any further questions about these changes.
