Change Notification #: 116438 - 00
Change Title: Intel® Server System R2208WT2YSR,
PCN 116438-00, Product Design, Order Code,
Rear panel and rear brackets new design
Date of Publication: August 21, 2018

Key Characteristics of the Change:

Product Design, Order Code

Forecasted Key Milestones:

Date Customer Must be Ready to Receive Post-Conversion Material*:	September 5, 2018
--	-------------------

* Intel appreciates the customer's desire to receive the latest revision of products. However, Intel manages inventory on a first in first out (FIFO) basis at the MM# level. Subsequently, customer requests for a specific revision of material (below the MM#) will not be supported by Intel.

Description of Change to the Customer:

This PCN follows PCN116118-05. This PCN we add the TA# update.

The Intel® Server Chassis and Intel® Server Systems listed in the "products affected" table are being affected by the following list of changes to improve the connection of Small Form-factor Pluggable transceiver (SFP+) cables on the rear panel and the miniSAS connection.

As a consequence of these changes Intel is creating a new MM.

The changes are:

1. Change the design of the left rear bracket

2. Adding holes to the rear panel

3. Riser bracket new design.

Customer Impact of Change and Recommended Action:

Intel recommends to the customers to perform a fit check on their systems and chassis based on this new design. Intel does not expect any impact to customers from these changes, but encourages customers to understand the change and determine the impact on their applications. For that reason Intel recommends that the customer perform a standard level of evaluation.
